Property owners/managers:

A few things to consider when setting up patrol towing with parking permits-

We advise the sticker permit instead of the hangtag permit. In our past experience it has worked out better for residents when something is stuck to their window versus them having to hang a permit every time they park the vehicle.

We also recommend that you be very strict in the placement of the permit. If you require all residents to place the stickers in the bottom passenger side of the windshied, it likely won't be obstructed by window tint or anything else. This is helpful to our drivers so they don't have to check each window, especially in Winter when they have to scrape the windows to see the permit.
